## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6, 8-11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Midya et al. (USP 5,801,519). Midya discloses (see figure 6) a maximum power point (14) of a solar panel (10) with a pulse width modulated (PWM) see column 6 and lines 7-24, with introduction of a perturbation into a switching parameter of a converter, and see column 4, lines 23-42, prior art descriptions of the perturbations of the various switching parameters such as duty cycle, frequency are well known in the art. See also column 4 lines 45-68, and column 5, lines 1-15, and also, column 9, lines 15-47.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Midya et al. (USP 5,801,519) in view of Lai et al. (USP 5,617,306)

Art Unit: 2838

Midya discloses the claimed invention; see above paragraphs, except for the use of a cuk or septic type converter. Lai discloses that it is known in the art to provide the use of a cuk type converter in a system that utilizes perturbations in the control of the circuit. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the use of a cuk type converter in a system that utilizes perturbations in the control of the circuit of Lai with the a maximum power point of a solar panel in a pulse width modulated circuit of Midya, in order to fully utilize the advantages of the cuk circuit for the control of the perturbations within the circuit.

### ***Response to Arguments***

5. Applicant's arguments filed 12/5/2003 have been fully considered but they are not persuasive. The crux/ basis of applicant's arguments is "Midya is exclusively directed to identifying a maximum power point based on a power derivative. Midya nowhere discloses or even suggests determining a maximum power point based on input characteristics of a converter." One of ordinary skill in the art can deduce that by reading the cited passages of the prior art above that the input parameters mainly the perturbations are being introduced into the circuit and is measured so as to determine the maximum power point. Please reread the cited paragraphs above.

6. Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to a general allegation that the claims define a patentable invention without specifically

pointing out how the language of the claims patentably distinguishes them from the references.

7. Applicant's arguments do not comply with 37 CFR 1.111(c) because they do not clearly point out the patentable novelty which he or she thinks the claims present in view of the state of the art disclosed by the references cited or the objections made. Further, they do not show how the amendments avoid such references or objections.

### ***Conclusion***

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
